

Innovative Developers Required

£25k to £35k salary and bonus

Do you have a can-do attitude, drive, enthusiasm, an entrepreneurial spirit and want to succeed in software development?
Then we want you to work for us...

SIMUL8 Corporation produces world renowned dynamic, innovative software. Our customers are located world-wide and include major corporations involved in finance, manufacturing, healthcare, telecommunications and logistics, as well as many public sector healthcare and transportation organisations. Our core product focuses on making our customers' lives easier – improving decision making effectiveness, organizational efficiency, and communication.

You'll be responsible for developing our next wave of simulation software products which are completely web based, keeping you at the cutting edge of technology. You'll be involved in the full life cycle of development, and you'll work hand in hand with our customers so that you deliver them software they need and want, It doesn't matter to us what languages you know, just prove to us that you've been doing first-rate, challenging, innovative development, with a focus on making it easy to use for your customer, and we can teach you the rest.

We guarantee you a fast paced, challenging, exciting and rewarding place to work. We also promise you fun; we play as hard as we work, with regular team day outs, and a company Wii in our dedicated social room!

Benefits - Working from home possible, with laptop and broadband to support this. Degree of flexi-time. Quarterly and annual bonus package. 33 holiday days per year (increases with length of service). Generous other company benefits over and above Statutory.

Training – An Investors in People accredited company, we actively support and promote the training of our development team and encourage you to spend time each month doing blue sky development.

Requirements – Minimum 2.1 in a numerate discipline or computer science.

Attributes we want you to have:

- 2 to 3 years development experience
- Knowledge and experience in the full development life cycle, that is from specification to development, to installers etc., and handling and interacting with customers on a regular basis
- Confident, social manner with exceptional communication skills
- Prior involvement in challenging and innovative development projects.
