

# Graduate Roles at SIMUL8 Corporation

**Start your career with SIMUL8 Corporation and help the world make better decisions.**

Looking for a grad job that gives you responsibility from day one, allows you to work with some of the world's largest organisations and really make a difference in the world? Then SIMUL8 Corporation is the place for you. We're a fast growing tech company delivering innovative simulation software to our users such as Nike, Amazon, Chrysler, the NHS and more. With the perfect blend of start-up culture and experienced team members to learn from – SIMUL8 is the perfect place to start your career.

## Management Scientist / OR Graduate

Our software was born from management science; most of our users are operations researchers or management scientists. To keep our users at the heart of our organisation our annual graduate recruitment pool is always made up of 50% management scientists, this keeps us thinking like our users.

When you join our management scientist programme, you'll come in and learn our software doing some consulting projects, you'll then have the option to specialise going into either:

- Software Development
- Marketing
- Customer Support
- Simulation consulting

You'll then move onto a specialised training programme upskilling you with the technical and soft skills you need in your chosen discipline. This programme is a fantastic opportunity to get into a digital tech organisation with global reach with a flexible career path to help you find your dream career.

## Data Scientist

Do you love numbers and tech? Data Scientists are unique, they combine strong analytical skills, with technical coding skills allowing them to leverage the latest AI, ML etc. techniques, and the ability to then productionise their analysis into tools that can be used again and again to help people make better decisions. Our Data Science program takes either Data Scientist graduates or Maths graduates. If you don't have coding skills we will provide you with the technical training needed to develop these. On our Data Scientist program there are 3 pathways for your development:

- Consultant working with our customers to develop operational simulation decision tools
- Software developer, using your skills and knowledge of users problems to develop the tool stack for your fellow Data Scientists
- Working internally within SIMUL8 Corporation analysing our data sets to provide business insight and developing our own internal decision tools.

## Commercial Graduate

Looking to specialise in sales? We recruit from engineering, management science, mathematics and business courses and provide training to transform you into a customer relationship expert. We recruit from these technical disciplines as you'll have gained a real insight into the challenges facing our users.

## How to Apply

Please send your CV and covering letter detailing why you're special enough for this great opportunity to [hireme@SIMUL8.com](mailto:hireme@SIMUL8.com).

# Your career starts here

## Our Internships

Kickstart your career with an internship at SIMUL8! All of our interns work on real, critical projects, there's no shadowing, you'll be doing. With autonomy and responsibility from day one, at SIMUL8 Corporation your internship will be challenging and you will truly learn about what business is like. Of the interns we've offered full-time positions to, 100% have accepted!

### Product Management Internship

Do you ever use an app and think, "This would be so much better if they designed it this way?" Then a product management internship is for you! Our Products Team work with our users to understand what they need from our software and then make it happen. They design the feature, create the specification, and work with developers as the user voice as it's developed, then they work with customers as they test the new feature to evolve it and make it perfect. This internship is ideally suited for anyone who is the unique blend of creative and analytical. Many of our interns who are interested in software development but don't have a computer science degree have used this as a perfect stepping stone into a career in software development.

### Data Science Internship

Can you find business changing insights in data? We're looking for interns with a strong maths and stats or OR background to work with teams throughout our organisation to help unleash insights in our data to drive radical growth. This is a rare opportunity to do an internship in an upcoming field as a data scientist, a career that Harvard Business School listed as the "sexiest and best paid" career path available in the world right now. Our data scientists are maths, stats and OR professionals first, they also use a wide ranging tech stack so are also coders. This is a great opportunity to develop your technical skills to supplement your data skills.

### Marketing Growth Intern

We have world leading software products and our marketing team ensure every decision maker across the globe knows about them. We're looking for interns who want to break into the new technology, content and data led world of marketing and help leverage it to drive rapid growth for our business. If you're creative and inspired with new ideas to build our community of users come join us!

### Simulation Consultant

Our consultants work with customers around the world using our software, SIMUL8 to help them improve and transform their process. From reducing NHS waiting times, to doubling the number of people tested for HIV in South Africa, and helping the New Zealand government to rapidly recover from major earthquakes, our consultants make a real world impact. A consulting internship is ideal for developing your client facing and project management skills and you get the satisfaction of really helping people.

### Commercial Intern

Do you enjoy working and talking with new people? Do you get a high from negotiating a discount? Our commercial intern programme is designed for anyone from an engineering or maths or business background looking to break into Sales. You'll learn the art of crafting a great deal for us and most importantly for our customers. You'll learn how our team build on that initial deal to build a long standing relationship with our users, supporting them in their journey of improving their organisations using simulation.

## How to Apply

Please send your CV and covering letter detailing which role you're applying for why you're interested in working at SIMUL8 to [hireme@SIMUL8.com](mailto:hireme@SIMUL8.com).
