

Data Scientist Intern

Glasgow city centre HQ

We're looking for a data scientist intern to join our marketing team and unleash insights in our data to drive radical growth. This is a rare opportunity to do an internship in an exciting new field, Harvard Business School listed Data Scientist as the sexiest and best career path available!

Why start your career with us?

Huge impact. The world's biggest organizations rely on our software. Simulations built with our software have reduced NHS waiting times, increased the efficiency of Detroit car makers and allowed the New Zealand government to rapidly recover from major earthquakes. Right now we're working with customers to tackle the HIV crisis in Africa and help prevent terrorist attacks on the US supply chain. We enable global change.

No shadowing. Our internship program is one of the best. Winner of the 2014 ePlacement of the Year and runner up the year before, we provide internships that step change your career. You'll be a real member of the team. No "shadowing" you'll be doing, learning from day one.

Part of a great company. Although we're now a multimillion pound business and long ago outgrew startup status we've kept our start-up vibe and culture. Life at SIMUL8 is fast paced and invigorating, everyone's opinion counts and everyone has the power to drive change.

What we offer you

- Internships are paid, you'll be doing a real job so we'll pay you a real salary with bonuses for exceptional work.
- Flexible working hours to suit your timetable.
- Commitment to your training and development, both technical and soft skills. You'll be learning from the best, our team are cutting edge, best of all they want to help you learn.

To be part of our team you'll need to be...

A-grade statistician. We don't just want an average number! You need to be doing a degree with a substantial statistics quota.

Know how to code. You'll be most efficient if you can do basic coding. If you can't code that's OK but you must have the desire to learn.

Say it on one page. You will need to share your findings at all levels, often with data naïve people. You need to know how to make your findings understandable by all and demonstrate how they impact our business. No one wants to read a 20 page statistical analysis so you also need to be succinct and do it all with one enlightening visual diagram.

Be proactive. You can't wait to be asked to analyze some data, you must be curious and generate your own questions based on what you know is happening in the business. Then go off and find the nugget of information that changes the course of the initiative and leads to unknown opportunities.

Be an over achiever. We don't do small goals. To be part of our team you must be prepared to give it everything you've got, we're looking for you to deliver!

We offer 70% of our interns i.e. the ones that impress us, a full time position.
